University of Alberta – Mining Learning Seminar

Who Should Attend:

This learning seminar will be of interest to all personnel involved in mine planning, design, operations, and maintenance. Managers and supervisors will be particularly interested in the different aspects of technological and social risk, as it affects the future of the mining industry.

To permit maximum interaction between delegates, the learning seminar attendance will be limited to 100 people. This provides a great opportunity to make new contacts as well as to re-establish old ones.

The 10th Annual Industry Learning Seminar

Managing Risk in a Changing Environment

Wow, I can not believe it's been over 10 years since we started this very successful seminar series. This year's seminar will be no exception as we continue to move mining forward considering risk associated with people, equipment and growth. Minimizing risk has to be everyone's goal as we focus on the prime concerns of safety, production and survival in today's mining world. As always the seminar is the ideal opportunity to network; reconnecting with colleagues and making new acquaintances.

Managing risk is the job of everyone in mining from the front line operator and supervisor right to the boardroom. This seminar will host industry leaders, key equipment suppliers and of course you, as we take an up close and personal look at dealing with risk at the front end of our business.

The learning seminar series is not just about attending and listening to the speakers; it's also about participating through questions and discussion with colleagues from across the mining industry.

We want to hear from you; the operator, the OEM, the supervisor. In fact if mining is a part of your work day, and especially so if you are concerned about the risk associated with your business, this is a forum that should not be missed.

We look forward to seeing you on June 29th and 30th.

Tim Joseph
